```java
1. import java.util.*;
import java.io.*;
class Main
{
        public static void main(String[] args)
        {

            String a,b="";
            char c;
            int d=0,i;
            try
            {
               Scanner sc=new Scanner(System.in);
               System.out.println("Enter the string:");
               a=sc.next();
               d=a.length();

               for(i=d-1;i>=0;i--)
               {
                  b=b+a.charAt(i);

               }

               System.out.println("The Reverse of the string is:"+ b);

            }
            catch(Exception e)
            {
               System.out.println("Enter only string");
```

```
        }

    }

}
```

Enter the string:
temple
The Reverse of the string is:elpmet
